Environmental Impact Assessment

Functional unit

The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense). Therefore, the functional unit shall be clearly defined and measurable.

Impact Indicator

The impact is measured through the "IPCC 2021 GWP100" method

Electricity impact calculation method

Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.

Life Cycle Analyses

Cradle to grave

Emission Factor Inventory

Num	Emission Factor	Source	Value	Unit
1	Softwood lumber 1kg unspecified	BASE EMPREINTE ADEME 3.0	0.621811	kg
2	Electricity Total (Scope 2 & 3) People's Republic of China	IEA 2023	0.7231	kWh
3	Freight Boat From CN to FR	WELOW EXPERTS 1.0	0.25227278	kg
4	Packaging – Wood – Average end of life in the EPR scheme – Impacts	BASE CARBONE ADEME 22.0	0.269	kg
